Four-year-old Claire is a true Wings of Hope success story. When she was two, she got very sick, very fast. When she was finally diagnosed with HLH Syndrome, a rare condition that is fatal if not treated, her mother started driving her from St. Louis to Cincinnati Children’s Hospital, an HLH Center of Excellence. When the 7-hour drive became too much for Claire, her mother found Wings of Hope. We flew her nine times round trip in 18 months—and Claire received a clean bill of health in July 2015!
