Did you know that about 90% of the individuals we serve in our MAT Program are frequent fliers? One of our youngest frequent fliers is William. He was born with clubfoot and arthrogryposis, a joint condition in which some of the joints don’t move as much as normal and may even be stuck in one position. We flew William 13 times round trip from his home in Minnesota to St. Louis Shriners Hospital – and, today, he is walking like a pro!
